

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

5 **Listing of Claims:**

Claim 1 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:

- a first substrate having at least one pixel controlling circuit;
- a second substrate having a touch-detecting circuit and a color filter formed on the
- 10 touch-detecting circuit, being positioned on top of the first substrate; and
- a liquid crystal layer filled between the space formed by the first substrate and the second substrate.

Claims 2-5 (canceled)

15

Claim 6 (original): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

20

Claim 7 (canceled)

Claim 8 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

25

Claim 9 (original): The input-sensor-integrated liquid crystal display panel of claim 8 wherein the protrusion includes a plurality of signal connecting contacts.

Claims 10-11 (canceled)

Claim 12 (currently amended): The input-sensor-integrated liquid crystal display panel of  
5 claim 1 wherein the touch-detecting circuit is a resistance detecting circuit, a  
capacitance detecting circuit, a sound wave detecting circuit, or an optical detecting  
circuit.

Claim 13 (new): An input-sensor-integrated liquid crystal display panel, comprising:  
10 a first substrate having at least one pixel controlling circuit;  
a second substrate having a touch-detecting circuit and a color filter, being  
positioned on top of the first substrate, the color filter and the touch-detecting circuit  
being formed on different sides of the second substrate; and  
a liquid crystal layer filled between the space formed by the first substrate and the  
15 second substrate.

Claim 14 (new): The input-sensor-integrated liquid crystal display panel of claim 13  
wherein the touch-detecting circuit is positioned on an outer side of the second  
substrate.  
20

Claim 15 (new): The input-sensor-integrated liquid crystal display panel of claim 13  
wherein the first substrate dis-coincides with the second substrate and has at least one  
protrusion.

25 Claim 16 (new): The input-sensor-integrated liquid crystal display panel of claim 15  
wherein the protrusion includes a plurality of signal connecting contacts.

Claim 17 (new): The input-sensor-integrated liquid crystal display panel of claim 13

further comprising a polarizer.

5 Claim 18 (new): The input-sensor-integrated liquid crystal display panel of claim 17 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

10 Claim 19 (new): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the touch-detecting circuit is a resistance detecting circuit, a capacitance detecting circuit, a sound wave detecting circuit, or an optical detecting circuit.

15 Claim 20 (new): An input-sensor-integrated liquid crystal display panel, comprising:  
a first substrate having at least one pixel controlling circuit, and a color filter formed on the pixel controlling circuit;  
a second substrate having a touch-detecting circuit and being positioned on top of the first substrate; and  
a liquid crystal layer filled between the space formed by the first substrate and the second substrate.

20 Claim 21 (new): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

25 Claim 22 (new): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

Claim 23 (new): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the first substrate dis-coincides with the second substrate and has at least one

protrusion.

Claim 24 (new): The input-sensor-integrated liquid crystal display panel of claim 23 wherein the protrusion includes a plurality of signal connecting contacts.

5

Claim 25 (new): The input-sensor-integrated liquid crystal display panel of claim 20 further comprising a polarizer.

Claim 26 (new): The input-sensor-integrated liquid crystal display panel of claim 25 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

10

Claim 27 (new): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is a resistance detecting circuit, a capacitance detecting circuit, a sound wave detecting circuit, or an optical detecting circuit.
